PROFILE

Computational researcher with a PhD in Energy Sciences from EPFL (2026), now a postdoctoral researcher at EPFL developing multiphysics models of electrochemical energy-conversion devices. Experienced in formulating and implementing coupled, nonlinear transport models (charge, species, heat and momentum), transient models for stability and degradation, and validating simulations against experiments. Strong scientific programming in Python, C/C++ (including a parallel MPI solver written from scratch) and Fortran.

RESEARCH EXPERIENCE

Sept 2026 – present	Postdoctoral Researcher · LRESE, EPFL Multiphysics modelling towards efficiency and stability improvement of gas-fed CO₂ electrolysis (Prof. Sophia Haussener) Modelling zero-gap membrane-electrode-assembly CO₂ electrolyzers with gas diffusion electrodes, resolving strongly coupled, nonlinear multiphysics across length scales, and developing transient models for stability diagnostics and improvement.
June 2021 – Aug 2026	Doctoral Assistant · LRESE, EPFL Quantitative assessment of transport limitations in CO₂ electrolyser systems (Prof. Sophia Haussener) - Developed a 2D gas-diffusion-electrode cathode model of a flow cell, resolving coupled charge, species and momentum transport; validated against experiments to identify performance-limiting mechanisms (Communications Chemistry, 2024). - Built a 1D bipolar-membrane model with electric-field-enhanced water dissociation; parametric and sensitivity studies to isolate rate-limiting transport and guide membrane design. - Coupled the GDE and bipolar-membrane models into an integrated bicarbonate-fed electrolyser model linking electrochemistry, ion transport and water management.
Jan – June 2020	Research Assistant · Thermofluids & Energy Systems Lab, IIT Delhi Data-driven, control-oriented reduced-order model (discrete-time realisation algorithm) to estimate the state of charge of a Li-ion cell in real time, accurate across standard drive cycles.
May 2018 – Nov 2019	M.S. Research Scholar · Dept. of Mechanical Engineering, IIT Delhi Wrote a parallel (MPI) lattice Boltzmann solver from scratch in C/C++; validated against in-house experiments (Physical Review Fluids, 2020).

EDUCATION

2021 – 2026	Ph.D. Energy Sciences · École Polytechnique Fédérale de Lausanne (EPFL), Switzerland
2018 – 2019	M.S. (R) Thermal Engineering · Indian Institute of Technology Delhi · GPA 10/10, Gold Medal
2013 – 2017	B.Tech. Mechanical Engineering · Indian Institute of Technology Gandhinagar · GPA 8.8/10

AWARDS

- EPFLglobalLeaders Doctoral Fellowship (Marie Skłodowska-Curie, Horizon 2020): competitive 48-month EU inter-sectoral fellowship, 2021.
- Gold Medal, perfect GPA (10/10), M.S. Thermal Engineering, IIT Delhi, 2020.
- 3 conference talks (incl. 245th ECS Meeting, San Francisco, 2024) and 4 posters (Swiss Electrochemistry Symposium 2023; ModVal 2025, 2026; SCS Electrocatalysis 2025); best poster award, IIT Kanpur, 2017.

SKILLS

Modelling	Coupled multiphysics PDEs, electrochemistry and porous-media transport, lattice Boltzmann, parameter calibration, sensitivity and scenario analysis
Programming	Python, C/C++ & MPI, Fortran, MATLAB
Tools	COMSOL Multiphysics, Ansys Fluent
